EDUCATION

2006 High School Diploma, *Institución Educativa Cisneros*, Cisneros, Colombia.

2013 B.Sc. in Physics, *Physics Institute, Universidad de Antioquia*, Medellín, Colombia.
GPA 4.36 (grades range linearly from 0.0 to 5.0. The minimum passing grade is 3.0).
Thesis "The place of the Milky Way and Andromeda in the cosmic web".
Description This study is aimed to characterize the local environment of Local Group (LG)-like systems from dark matter simulations of the large-scale universe. Using two different types of simulations, an unconstrained simulation (Bolshoi project) and a set of constrained simulations (CLUES project), it is first constructed a LG-like sample based upon observational constraints on the kinematic properties and isolation criteria of the real LG, along with the results of the CLUES simulations. By using a tensorial scheme based upon the peculiar velocity field of the dark matter, the V-web scheme, it is classified the local environment of systems in each simulation. Finally, it has been found that LG-like systems lies preferentially in sheet-like regions, furthermore a significant environmental bias for the total mass and the specific energy. No correlations have been found for the specific angular momentum and other studied properties.
